# EB Shape Divider

Creative Blocks · https://essential-blocks.com/docs/eb-shape-divider/

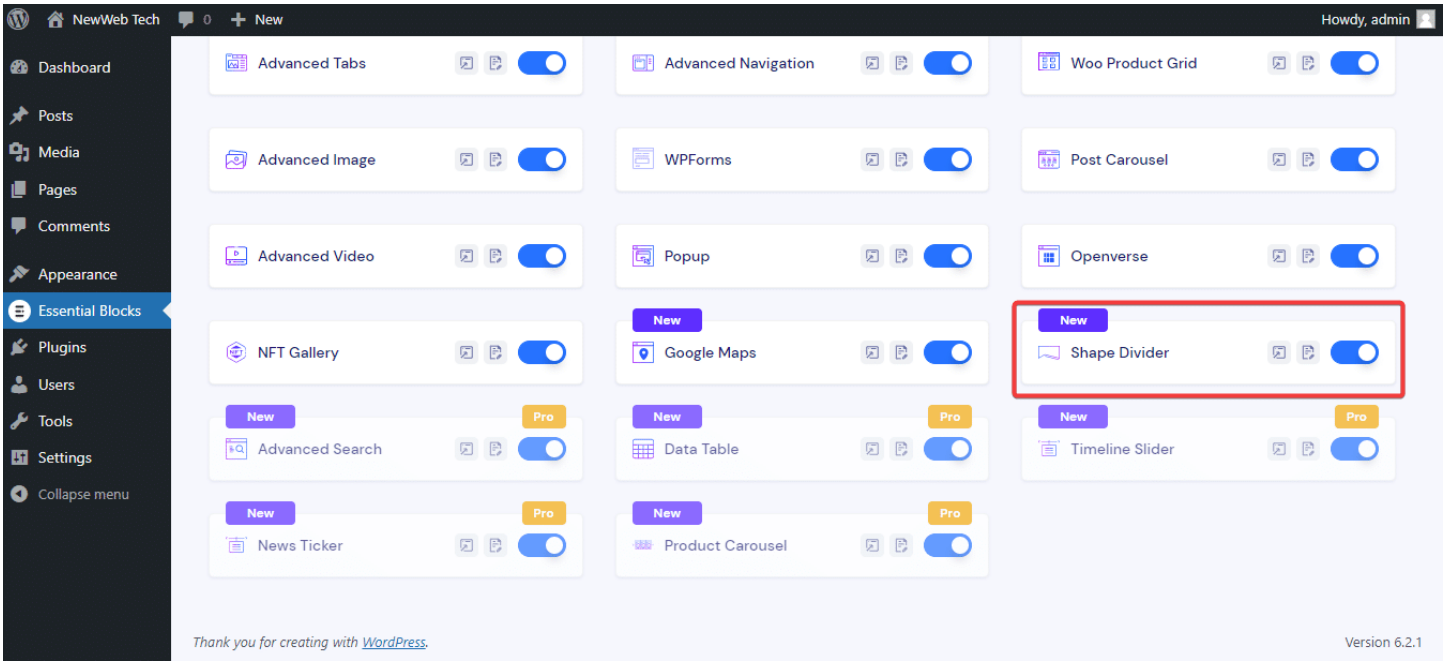
With **EB Shape Divider** you can create a separator between different sections of your website with stylish graphic shapes. This useful block can be used at the top or bottom of web pages to separate & highlight sections and strips.

Follow the step-by-step guideline to learn how to use the **EB Shape Divider block**.

[Note: **EB Shape Divider Block** offers both free and premium features. So, you need to install and activate both **Essential Blocks** and **Essential Blocks PRO** to use the premium features.]

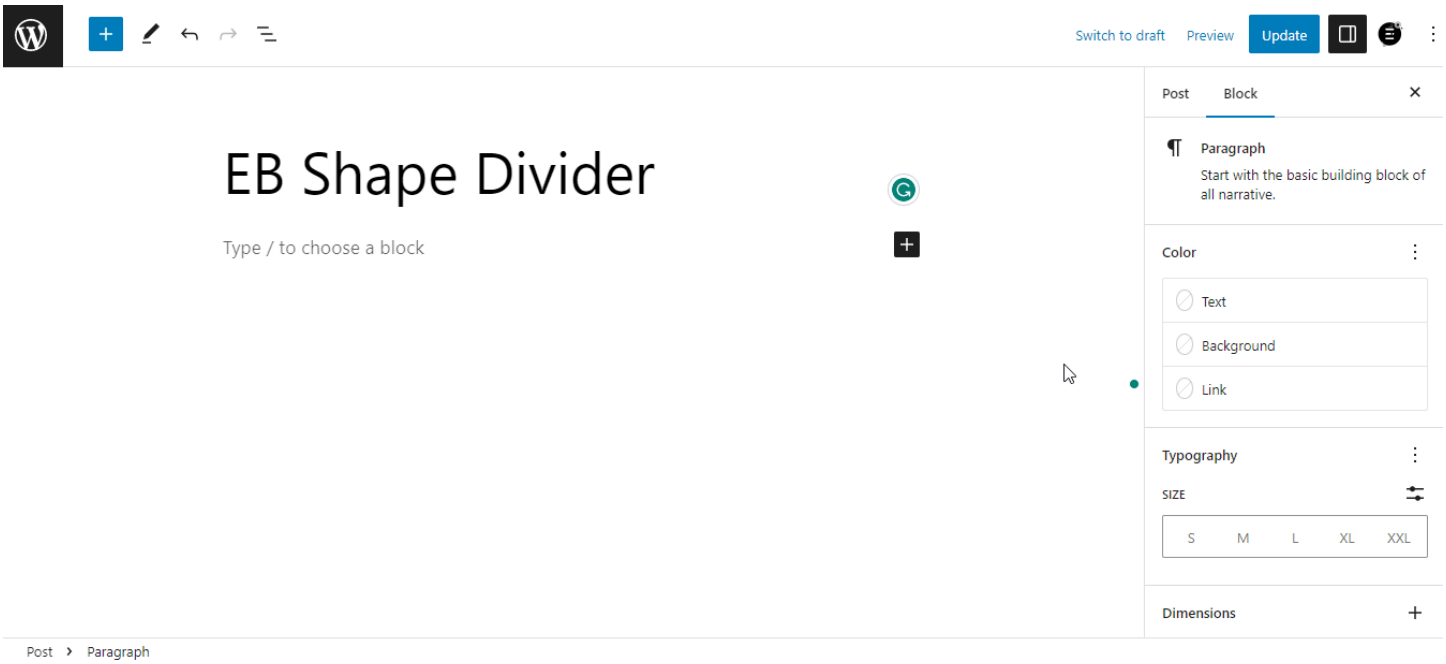
## How To Activate Essential Blocks Shape Divider?

To start with the EB Shape Divider block on your WordPress website, you need to activate it first. To activate it, navigate to '**Essential Blocks**' → '**Blocks**' from your WordPress dashboard and make sure the '**Shape Divider**' block is enabled.



# How To Configure Essential Blocks Shape Divider?

First, open a page in the Gutenberg block editor. Then, click the **‘+’** button on your page and search for ‘**Shape Divider**’ to add the block. Just click on the block, and it will appear instantly on your page.



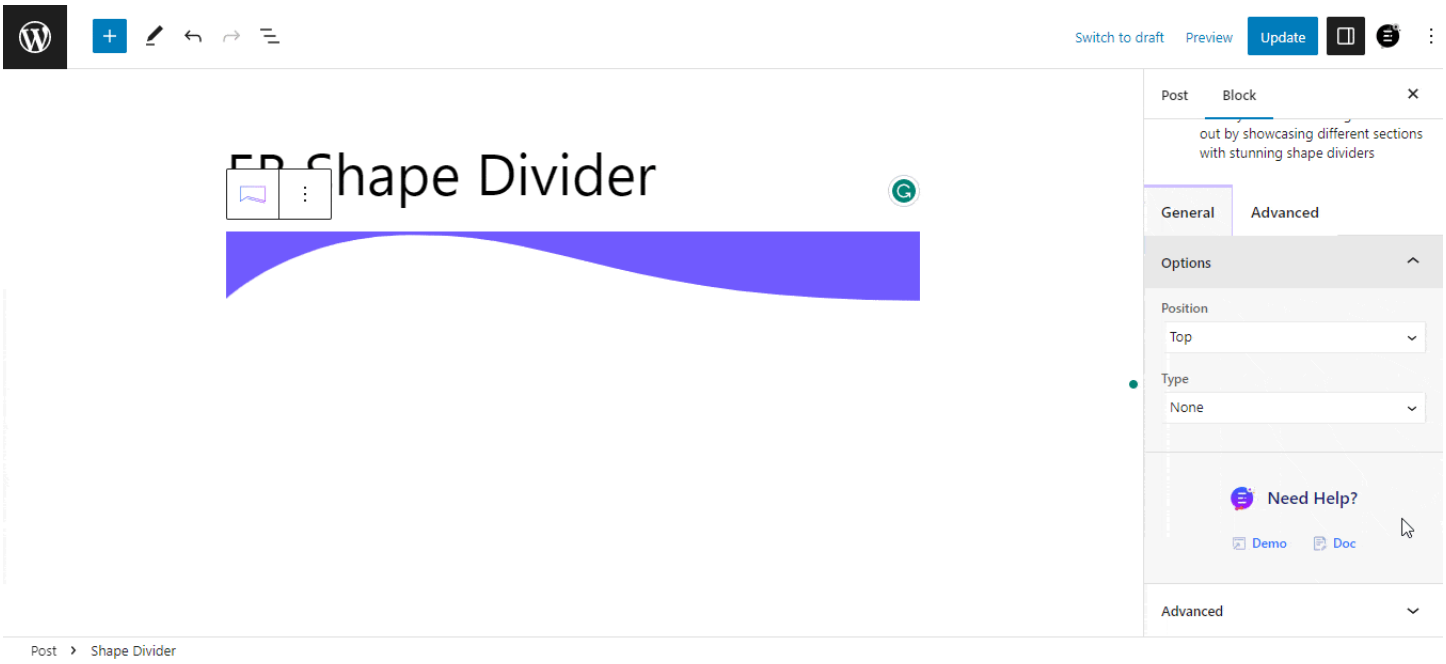
Now it's time to customize the EB **‘Shape Divider**’ block to get your preferred design, size, and appearance.

## General

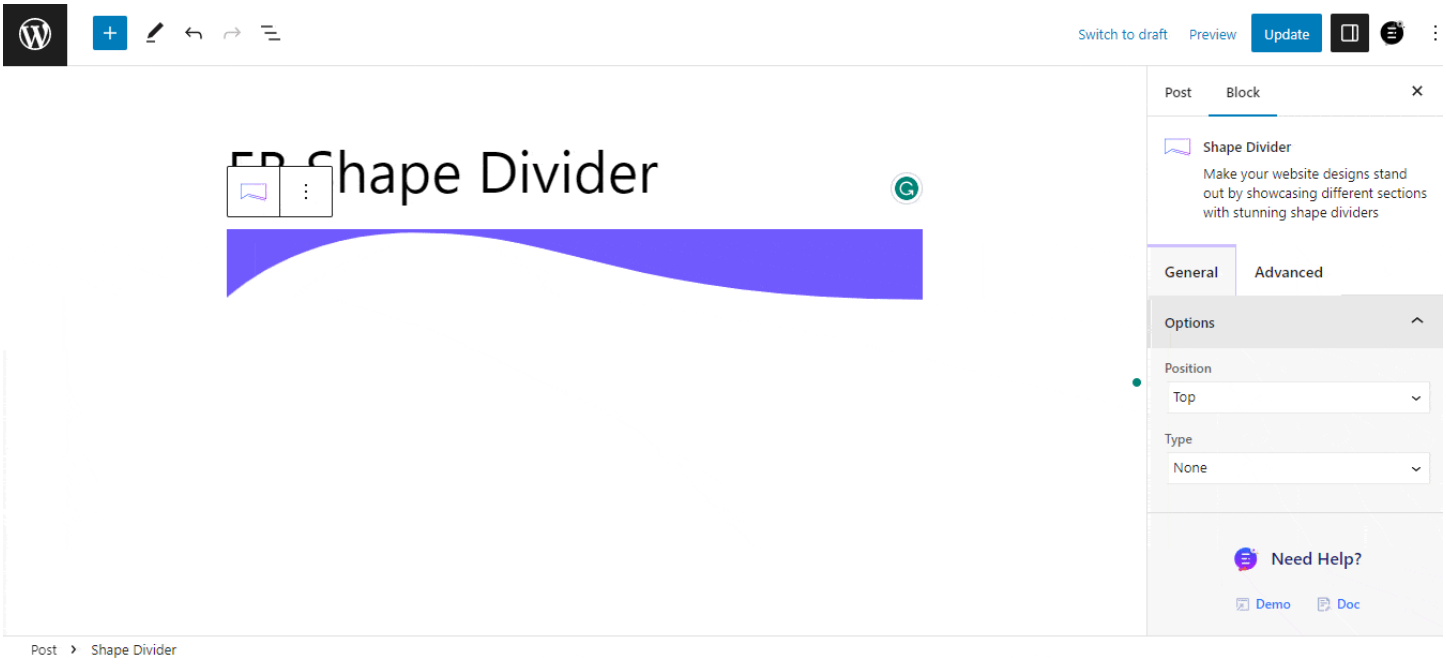
The **General** tab has multiple options to customize your Shape Divider’s **position, type, color, heights, responsive controls, flip buttons**, and more.

Click on ‘**Position**’ to decide whether you want a shape at the top or bottom. In the ‘**Type**’ section, there are four different shapes you can use for free. Plus, there are five more shape types available for premium users.

The EB Shape Divider Block comes with a total of 9 design presets, among which four are completely **FREE**. But with the **Essential Blocks PRO**, you can unlock five premium, exclusive presets or layouts for your **Shape Divider Block**.

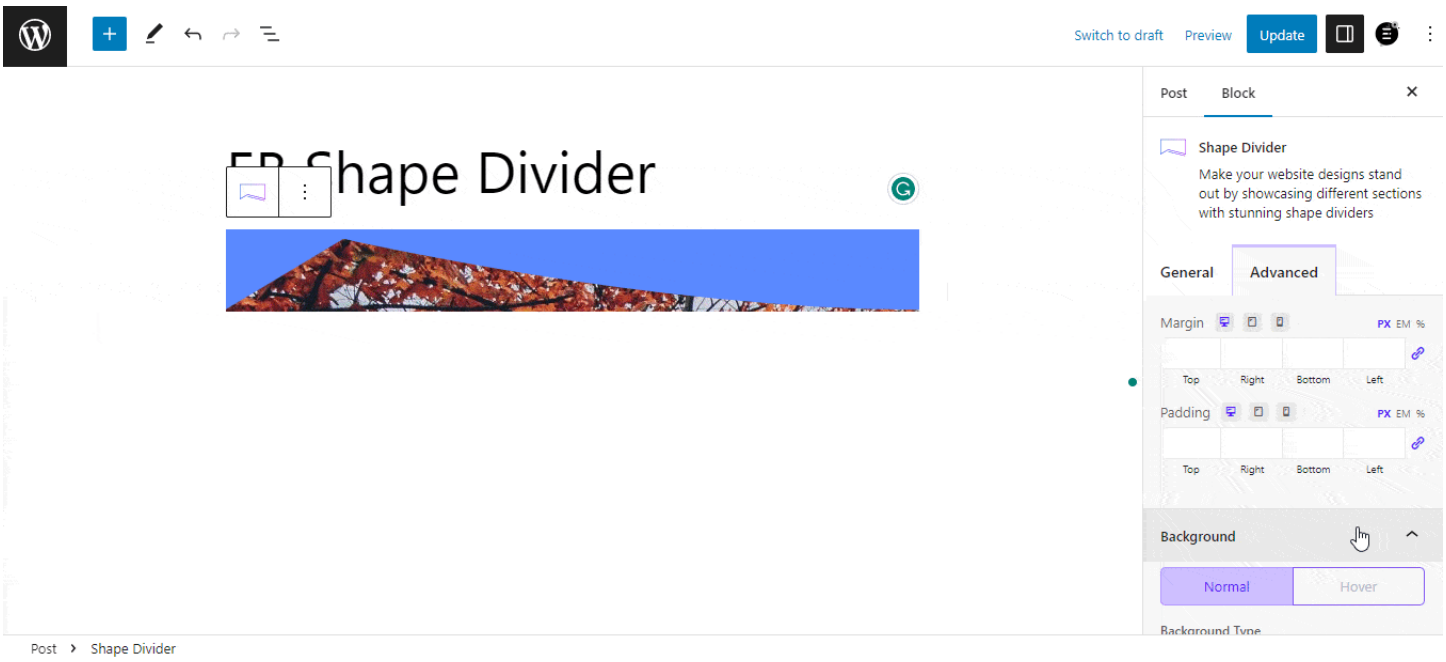


When you choose a shape type, you will find options to customize the **color, height, width, flip, and bring-to-front** options. You can also add **Additional CSS CLASS** to make the shape you want.

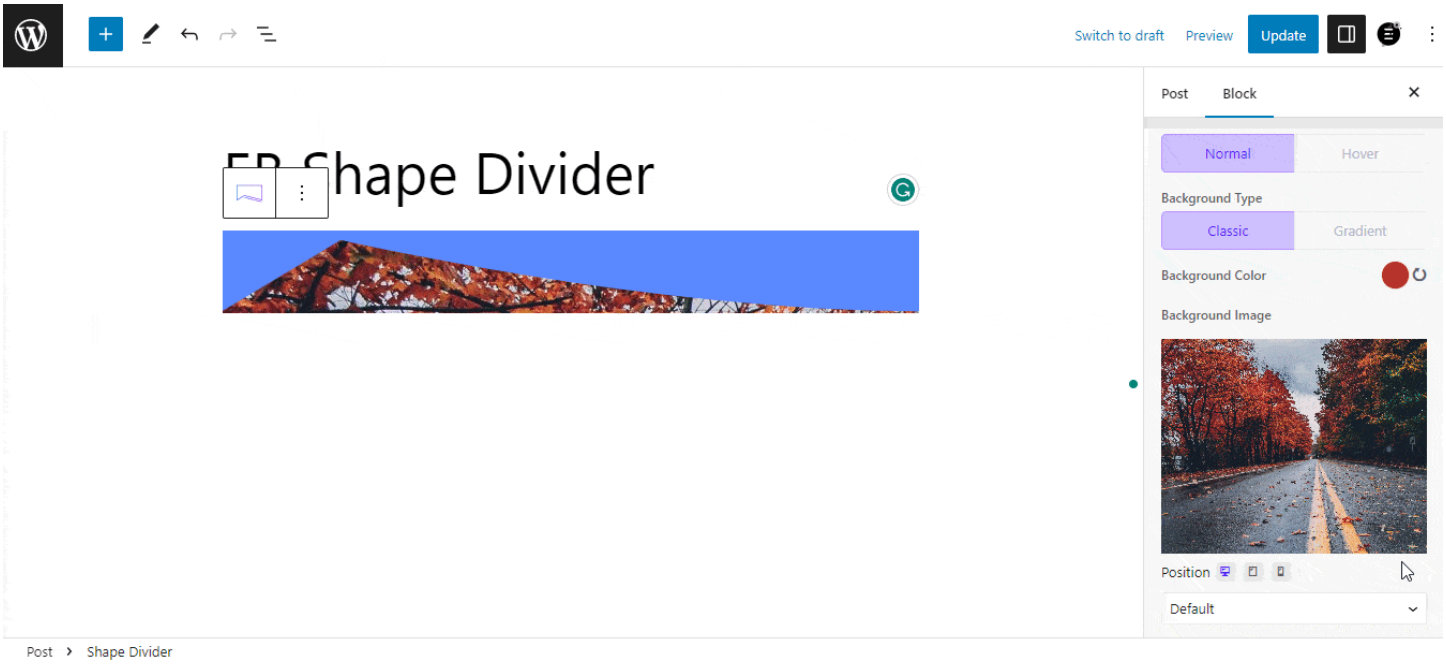


## Advanced

Move to the **‘Advanced’** tab now. Under the Advanced tab, you can change the **Margin** & **Padding** of your EB Shape Divider block. In the **Background** tab, you can upload any images and choose between the **Normal** or **Hover** effect on the image.

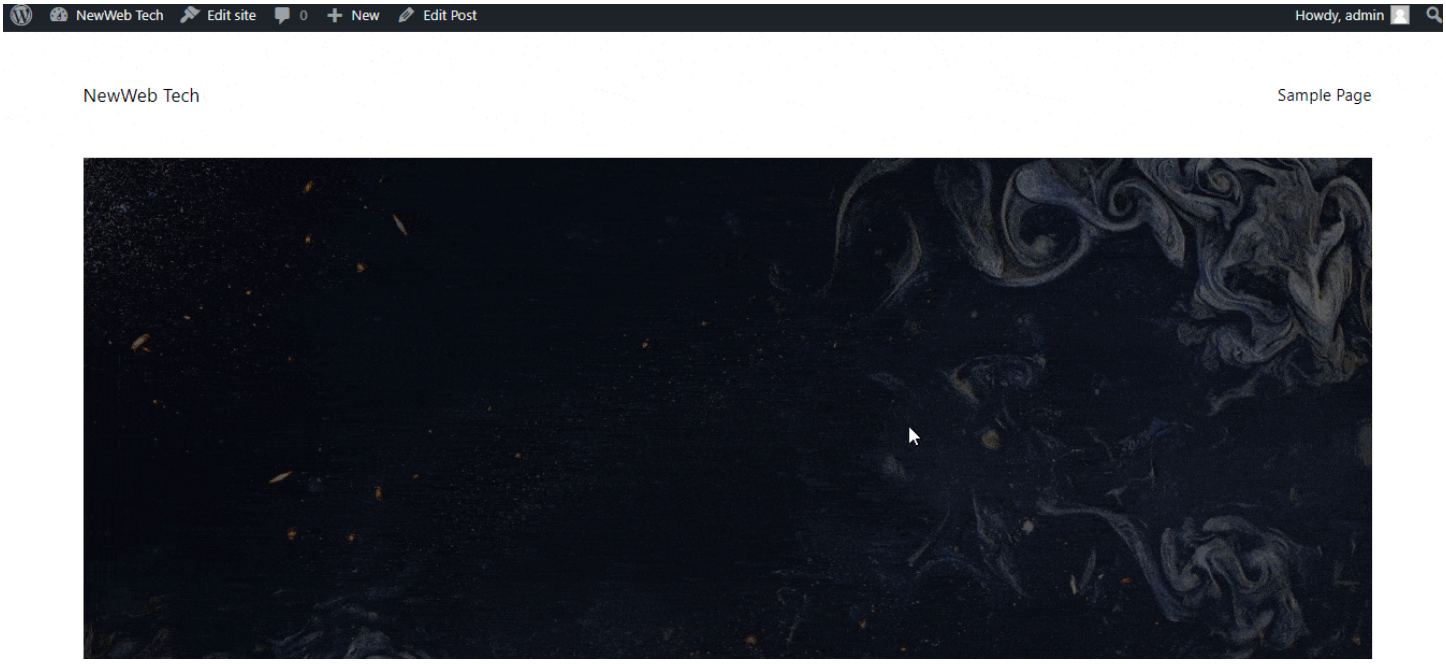


On top of that, you can customize the **background image's position, attachment, color position, and size**. Under the **Border & Shadow** tab, you can easily customize **Border Style, Box Shadow**, etc. Plus, the Responsive Control options will let you hide this specific feature on selected devices.



## Final Outcome

Thus, following the simple steps, you can easily style and customize your Shape Divider block and create a separate section on your website stylishly.



This is how easily you can design and configure an EB Shape Divider block in Gutenberg.
