How To Re-Generate Instagram Access Token For Essential Blocks?

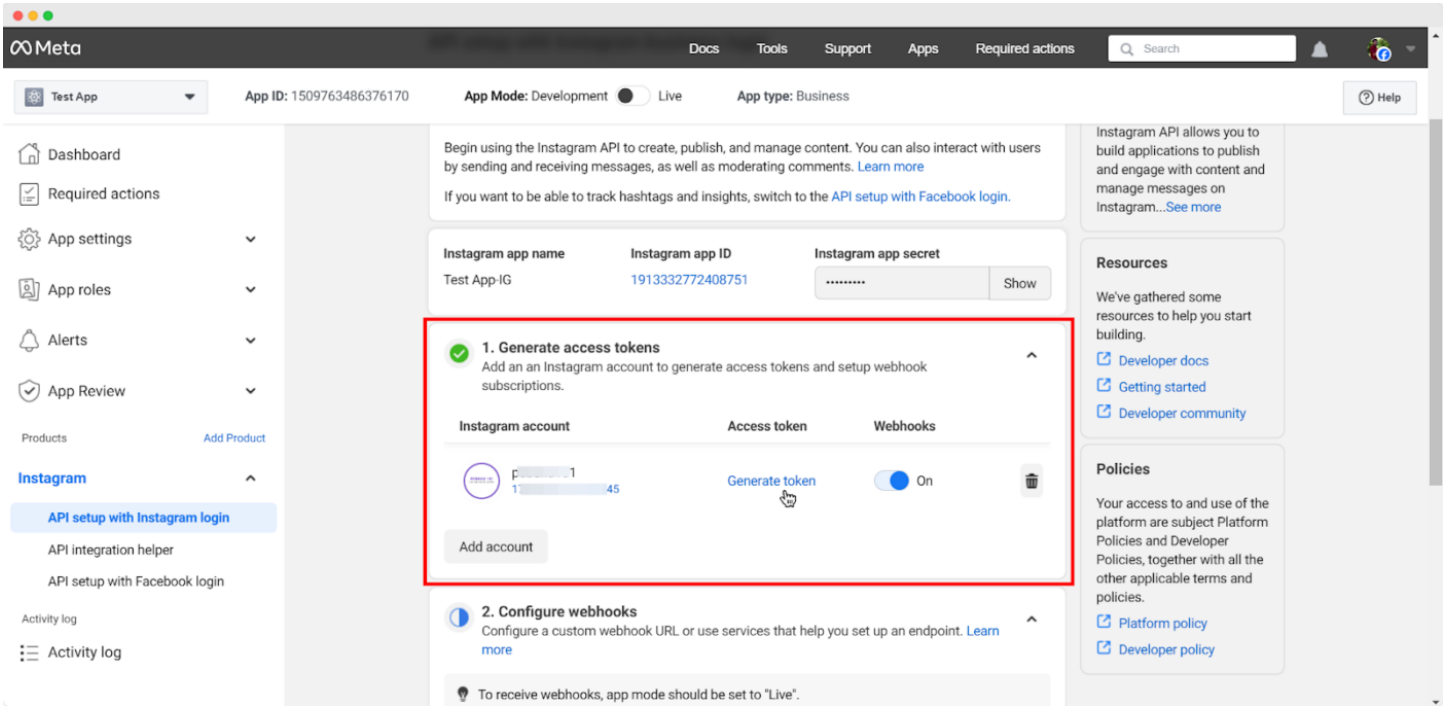

Configurations · https://essential-blocks.com/docs/retrieve-instagram-access-token/

When your generated Instagram access token expires, you will need to create a new one. By following the steps below, you can generate a new access token for Instagram, which is needed to use **Instagram Feed Block** from Essential Blocks.

Note: *Read this* ***documentation*** *if you want to create Instagram access token to set up an Instagram Feed on your website using Essential Blocks.* Also, if you want to change your Instagram account or have lost your access token, you can follow the steps below.

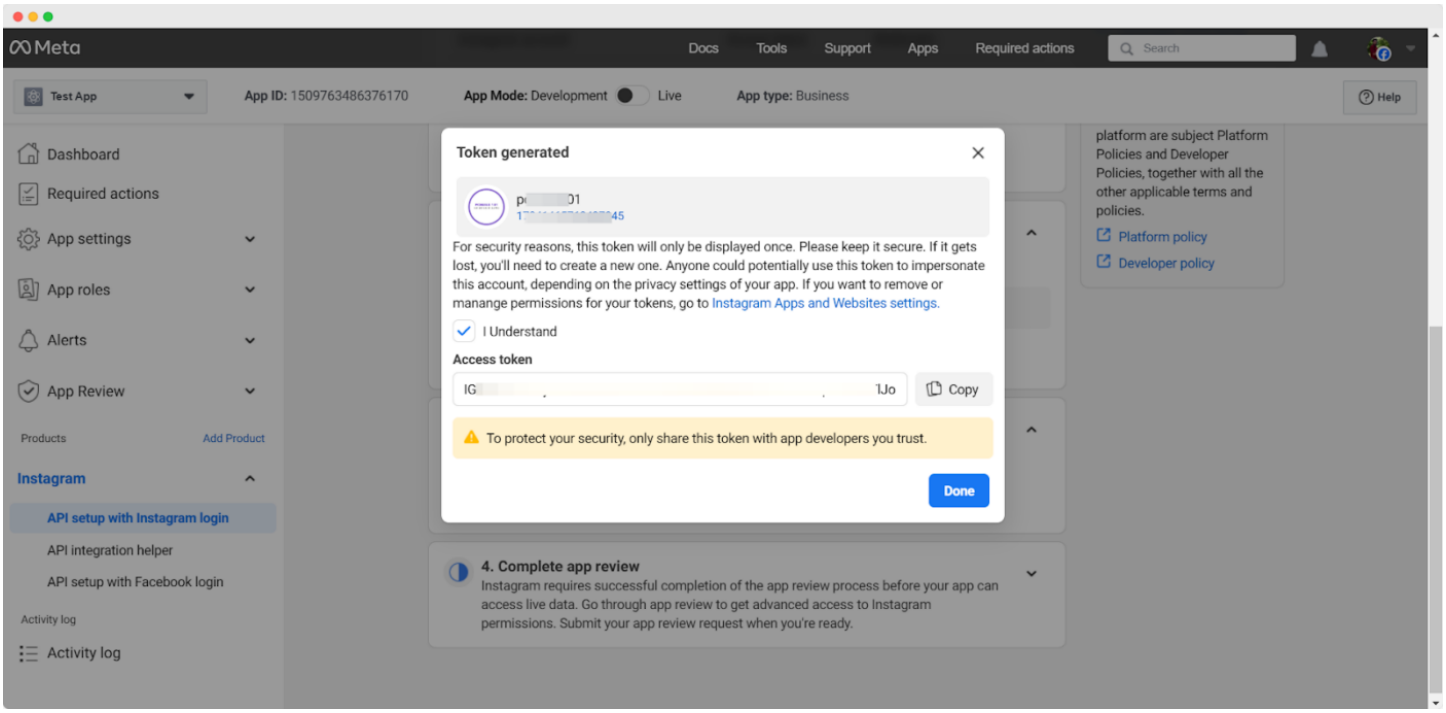

Step 1: Go To Instagram Settings In Meta Developer Account

From your meta developer account dashboard, go to Instagram settings. In the '**Generate Access Token**' section, click on the '**Generate Token**' option to create a newly generated access token. Then, a popup will appear.

Step 2: Re-Generate Instagram Access Token

In the popup, you will get the Access Token and can copy it with one click. A message stating the declaration of the generated token will be displayed only once.

This is how easily you can re-generate Instagram Access Token from your Meta Developer account dashboard app settings. Using this token, you can swiftly **configure Instagram Feed** in Gutenberg.
