EB Slider

Content Blocks · https://essential-blocks.com/docs/slider/

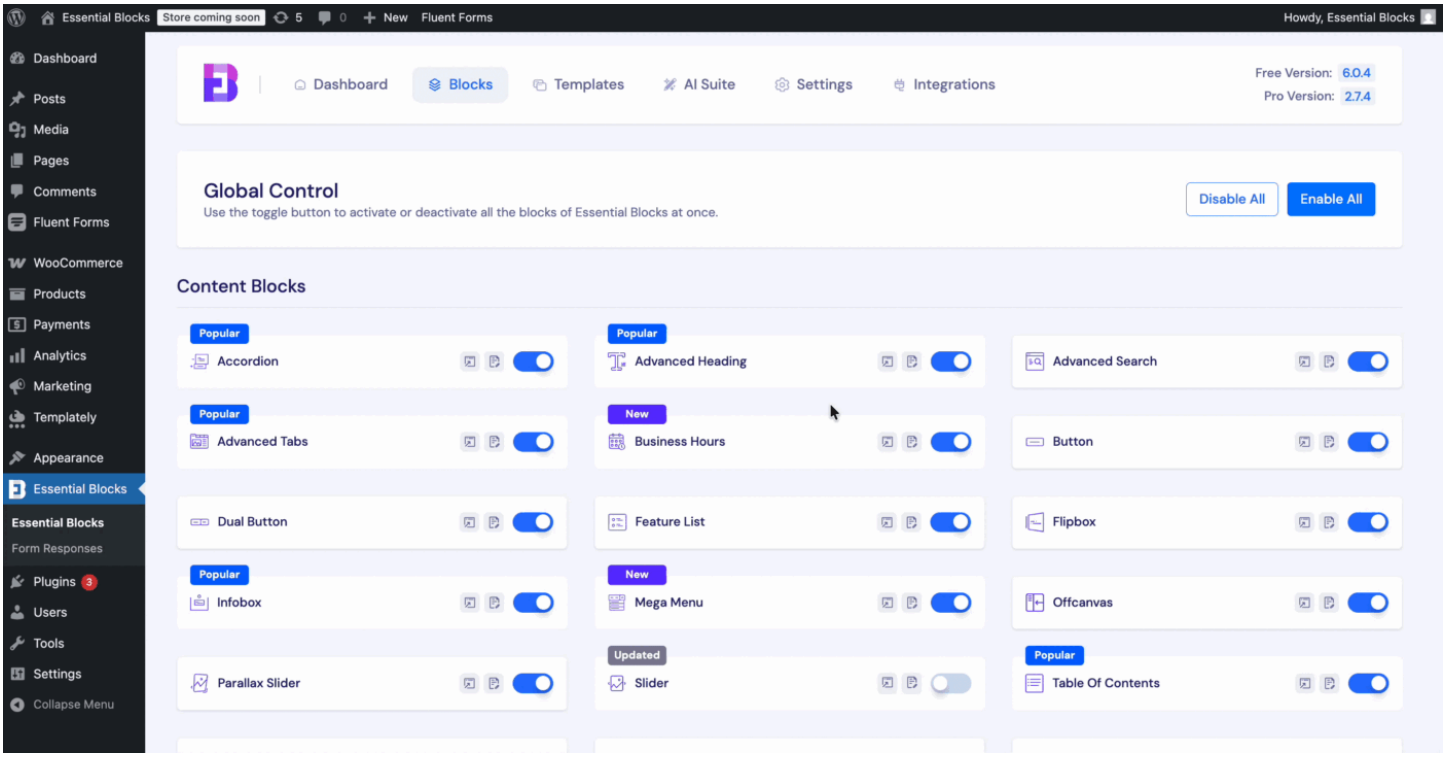

A well-placed **EB Slider** block can enhance the overall visual aesthetics of your homepage in a beautiful way. This responsive Gutenberg block can fine-tune your marketing message with immersive images.

Follow this step-by-step guide to design website content using the **EB Slider block in Gutenberg**.

How To Activate EB Slider Block?

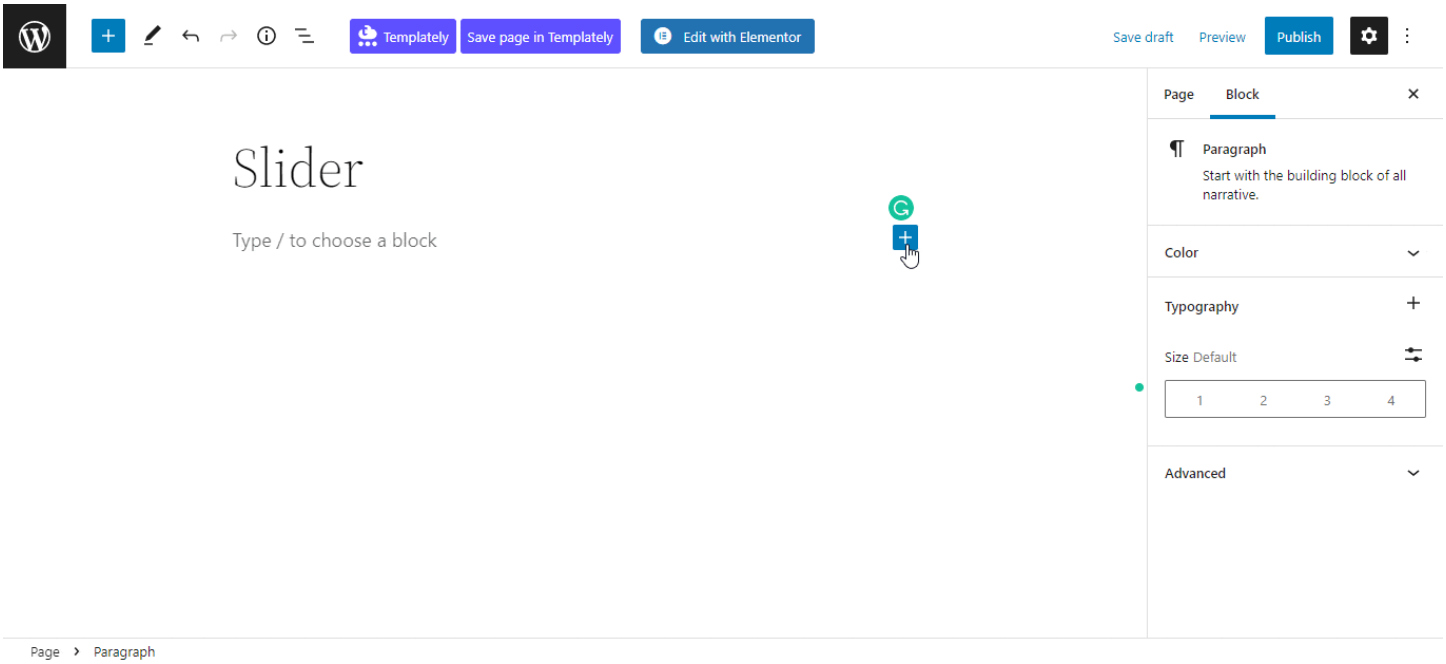

First, **install and activate the Essential Blocks** for Gutenberg plugin into your WordPress dashboard. Essential blocks come with modular control which gives you the freedom to enable only using blocks.

To activate EB Slider Block, navigate to **Essential Blocks → Blocks**. Then, toggle to enable this **‘Slider’** block. After that, click on the **‘Save’** button.

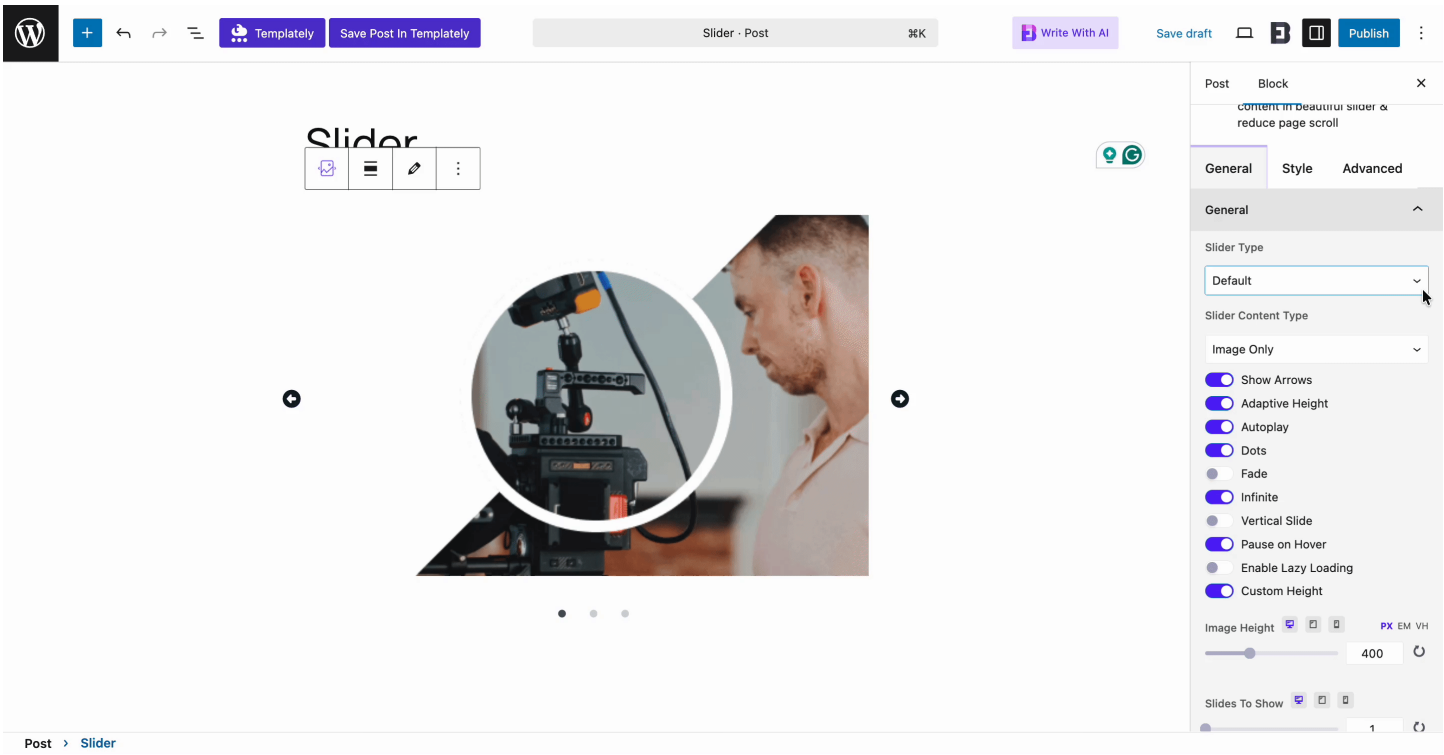

How To Configure Slider Block In Gutenberg?

Now open a new page in Gutenberg or an existing page from the WordPress dashboard. Press the **'+'** icon, type **'Slider'** on the search box, and just click on the block. It will successfully appear on your main editing page.

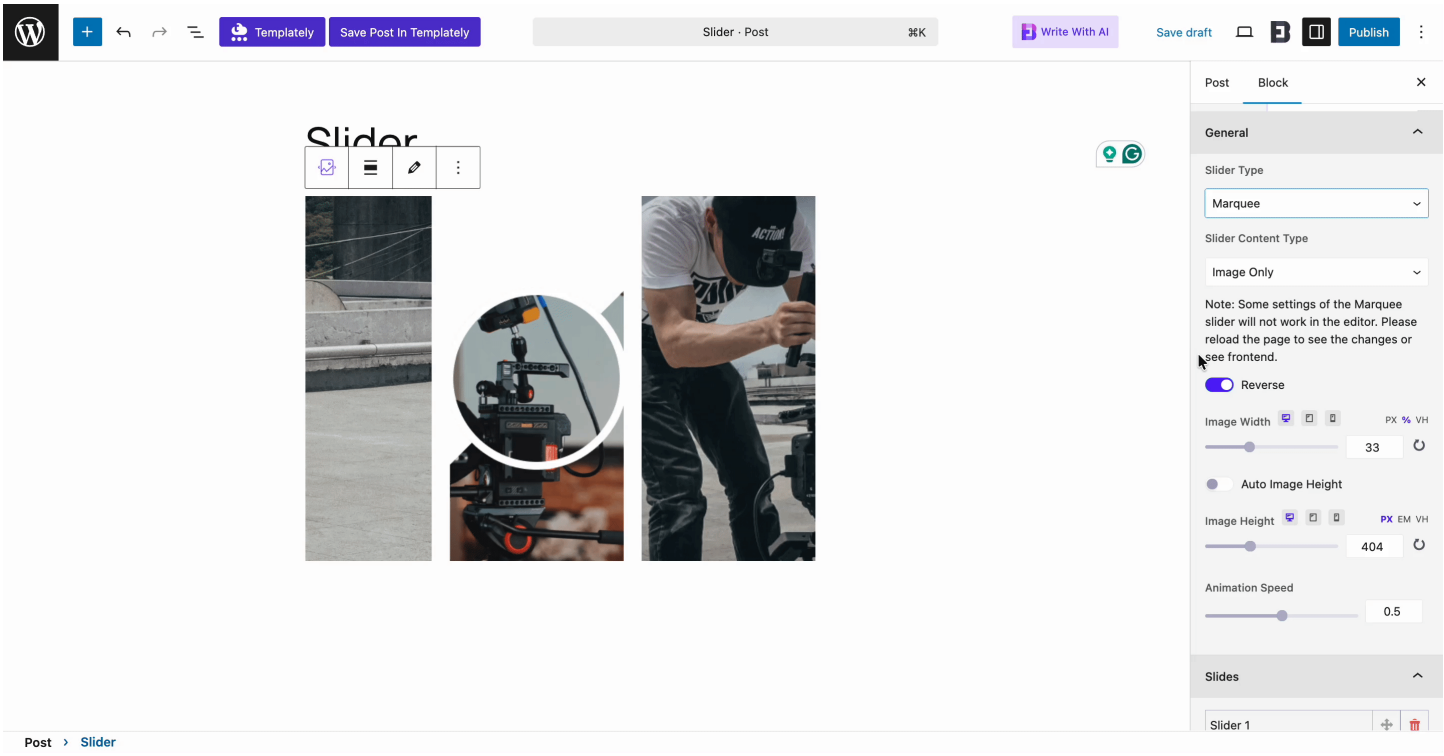

General

Now the block is on your main page, you can style the block in many ways. Navigate to the **Block→ General** tab. In this tab, you can either keep the default slider or you can add the **‘Marquee’** effect to the slider. In the **‘Marquee’** type, you can choose a slider image with or without content. There is also an option to enable or disable the ‘Reverse’ to control the showcasing of the slide. Here, you can also adjust the **‘Image Width’**, **‘Image Height’** and **‘Animation Speed’** for the effect.

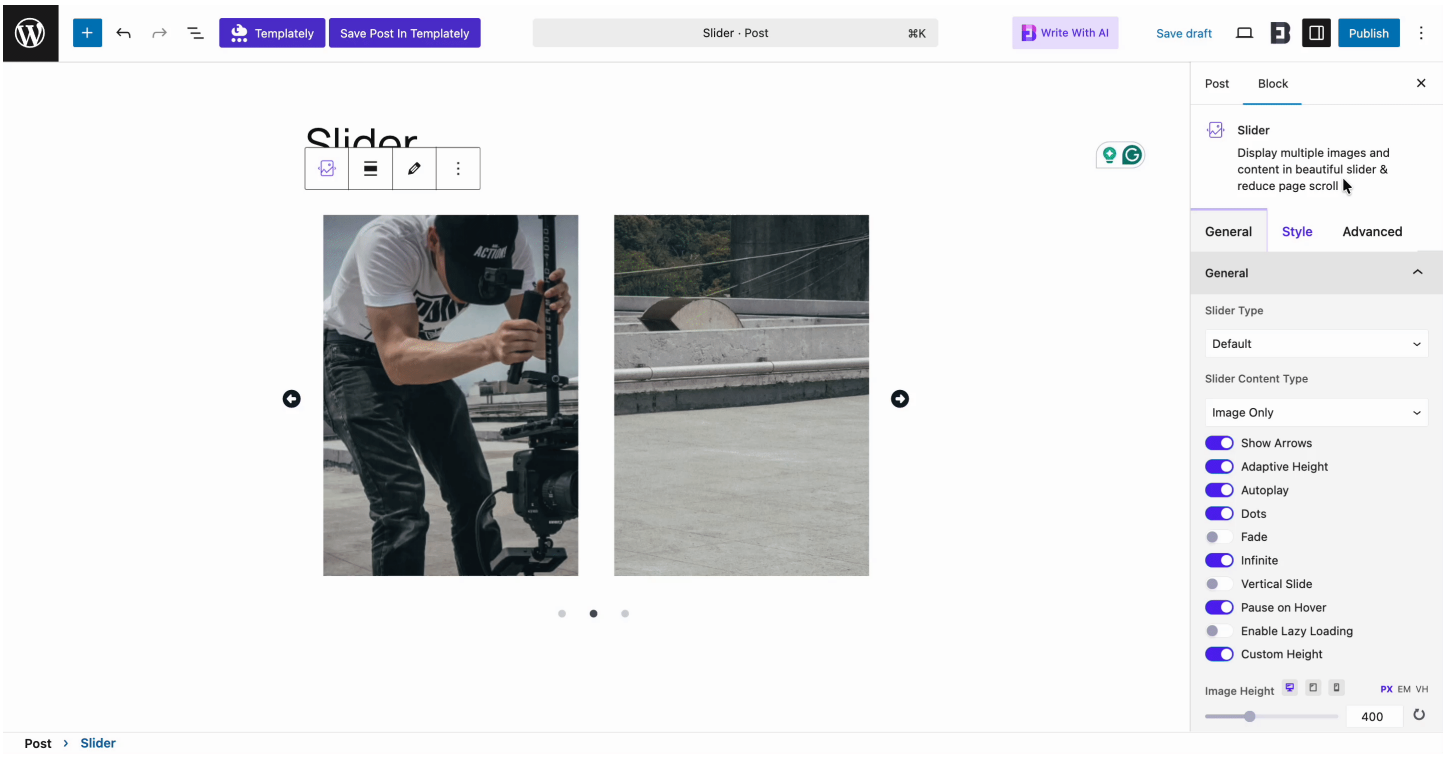

From the default options you you can customize your **Slider Height**, **Slides To Show** & **Animation speed** as per your preference. You can control your image’s **Adaptive Height, Autoplay Dots, Fade,** etc features.

Style

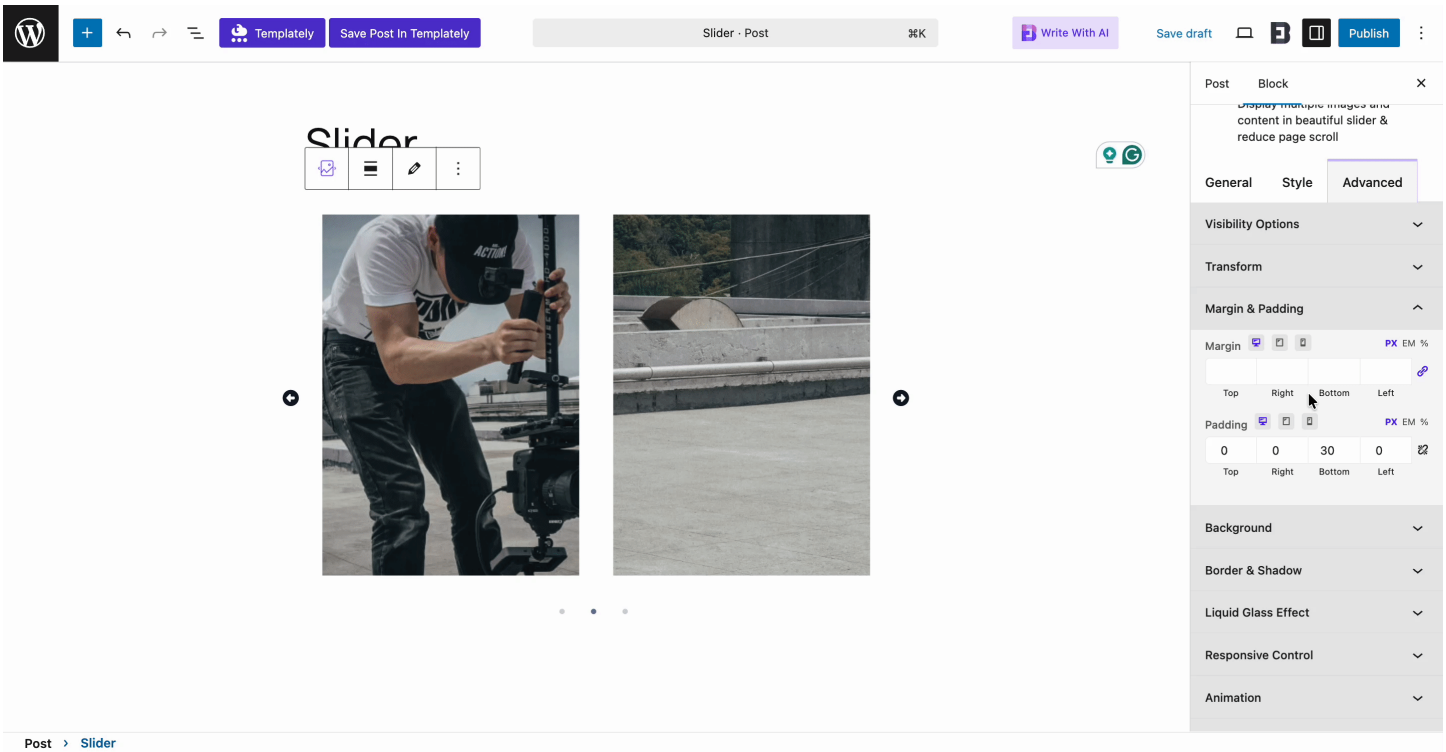

From the ‘Style’ tab, customize the outlook of your block by navigating to **Block→Style. Under** this tab, you can customize your **Slides Gap** between images.

Under the **Arrow** tab, you can change your Arrow effect between **Normal** or **Hover,** as well as change the **color** of your slider arrow, **Arrow Size** & **Arrow Position**. Under the **Dot,** tab, you can customize the **Color**, **Active Color**, **Size**, **Gap** & **Position** of your slider’s Dot.

Advanced

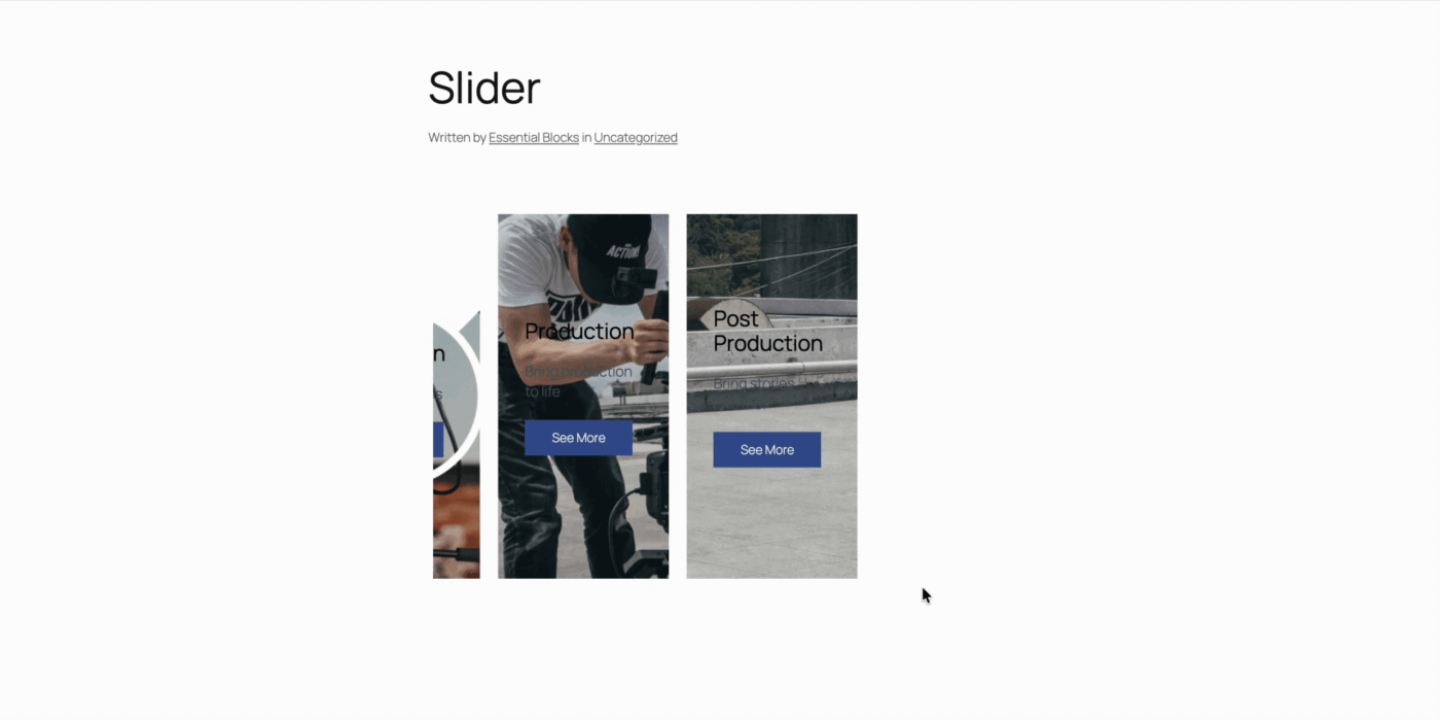

From the **‘Advanced’** tab, navigate to **Blocks→Advanced.** Under the **Advanced tab**, you can change the **Margin** & **Padding** of your slider block. Under the **Background** tab, you can upload any images as well as choose between the **Normal** or **Hover** effect on the image.

Besides, you can configure your **Background image's position**, **attachment**, **repeat sequence**, and **size**. Under the **Border & Shadow** tab, you can easily customize **Border Style**, **Border Color, Border Width & Radius,** and **Box Shadow.**

Final Outcome

By following these simple steps you can easily style and customize your **Slider** block.

This is how to design and configure an **EB Slider** block in Gutenberg easily.
