How Do I Enable Unfiltered File Uploads in WordPress? (SVG, JSON, etc,)

FAQ · https://essential-blocks.com/docs/unfiltered-file-uploads-in-wordpress/

Essential Blocks for Gutenberg plugin allows you to upload unfiltered files to your WordPress website, including SVG, JSON, EXE, and more. To enable unfiltered file uploads, go to **‘Settings’** from Essential Blocks dashboard, then toggle to enable **‘Unfiltered File Uploads.**’ That’s it. You can now seamlessly upload SVG or JSON files from the Gutenberg editor using image-supported blocks like Accordion, Filterable Gallery, Advanced Image, and others.

***Note**: Uploading unfiltered files (SVG & JSON) can pose security risks. Essential Blocks will attempt to sanitize these files to remove potentially harmful code. You should only enable this option if you know the associated risks.*
